General

Bandpass Filter **Type:**

Physical & Mechanical Properties

12.50 +0/-0.25 **Diameter (mm):**

9.0 **Clear Aperture CA (mm):**

5.90 **Thickness (mm):**

Construction:
Mounted in Black Anodized Ring

Optical Properties

700.00 **Center Wavelength CWL (nm):**

+10/-0 **Center Wavelength CWL Tolerance (nm):**

40.00 **Full Width-Half Max FWHM (nm):**

±8 **Full Width-Half Max FWHM Tolerance (nm):**

80 **Minimum Transmission (%):**

Traditional Coated **Coating:**

1x10⁻⁴ avg Xray to 1000nm **Blocking Wavelength Range (nm):**

Environmental & Durability Factors

-50 to +70 **Operating Temperature (°C):**

Regulatory Compliance

Product Details

- Passband Transmission up to 80%
- 441.6 to 1064nm Wavelength Options with 10, 20, and 40nm Bandwidths
- Ideal for Medical and Analytical Applications

High Transmission Traditional Coated Bandpass Filters are designed for situations where far-infrared blocking is not required, allowing for up to 80% transmission in the passband region and good blocking over the visible and NIR wavelength range. Featuring popular laser, mercury, biomedical, and analytical spectral lines, these filters cover a wide range of visible and NIR wavelengths. A hermetic seal and an anodized metal mount help maintain performance in high humidity environments and protect against chipping and scratching. High Transmission Traditional Coated Bandpass Filters are ideal for a range of scientific and medical applications such as spectral radiometry, medical diagnostics, chemical analysis, and Colorimetry. For applications requiring wider blocking ranges, [traditional coated bandpass filters](#) are available whereas applications requiring higher transmission above 90% are best served with [hard coated bandpass filters](#).
