Certificate of Conformance:

- Detect Imperfections on Reflective Surfaces
- Line Pattern Projected Through Light Guiding Diffusion Plate
- Multiple Wavelengths and Working Distances Available

CCS Coaxial Line Pattern Flat Lights feature a line pattern on the surface of a light guiding diffusion plate which allows for the detection of minute bumps and dents on reflective surfaces. When integrated into a machine vision system, the image of the reflected line pattern highlights defects by breaking the continuity of the surface and distorting the line pattern. These flat lights are available with two pitch options, 1mm for shorter working distances and 2mm for longer working distances. CCS Coaxial Line Pattern Flat Lights are ideal for inspection of reflective surfaces such as mirrors, metal sheets, glass surfaces, and reflective films.

Two types of line patterns available

Select one to match your system conditions.

Imaging examples

1 mm type
LFX3-PT-A Series

Narrow pitch

Distance: 30 mm

2 mm type
LFX3-PT-B Series

Wide pitch

Distance: 150 mm

The distance from the Light Unit to the workpiece is **short**.

The distance from the Light Unit to the workpiece is **long**.

Example configuration (LFX3-100-PT)

Imaging example: Imaging the external appearance of metal plate

Workpiece: Metal plate

LED Coaxial Light

Coaxial Lights illuminate the whole surface evenly, making it difficult to detect the bumps.

LFX3 Line Pattern Light

Line Pattern Lights highlight the bumps as curved lines.
